Document 2: JP 2003-507495 A (David BOOCOCK; Gavin BOOCOCK; and Brooke BOOCOCK), 25 February 2003

Document 1 discloses a method for producing diesel fuel oil from a waste edible oil and an alcohol. However, the method in question employs a catalyst in order to refine the glycerines that are generated.

Likewise, document 2 discloses a method for producing fuel from a fatty acid, a triglyceride and an alcohol, and does not indicate that glycerines are generated. However, the method in question differs from the present invention in that the method employs a fatty acid as a starting material, and in that the method also employs a catalyst.
